

Changing The Way Businesses Do Reporting

In today's complex business environment, people need immediate access to real time information. That's why Navigator was designed; to give you 24x7 access to all the information you need to be successful. With Navigator, it's not just about having reports delivered on time, it's about changing the way businesses do reporting.

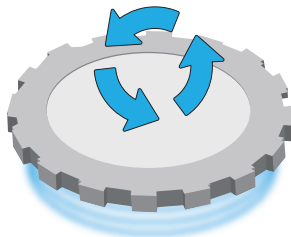

Navigator: The Solution

Navigator's ad-hoc design empowers everyone across the organization to create, access, and share reports online; even non-technical business users. This lowers the reporting burden placed on IT, and letting them instead focus on their core business processes.

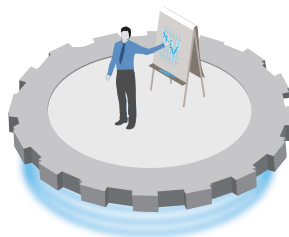

Getting started with Navigator is as easy as Download - Connect - Analyze - Decide. We define rapid deployment as downloading from our website and connecting to your database in 30 minutes or less. Once you start using Navigator's analytical functions, you'll start seeing the trends before they happen.

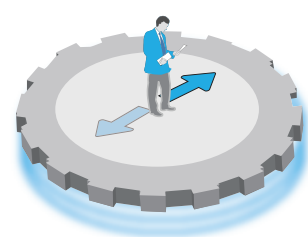

Download.

Connect.

Analyze.

Decide.

Features

- » Common web interface for all of your applications
- » Web-based architecture gives you access to live data online
- » Customizable graphs, charts, GUI's, KPI's displaying real time information
- » Enhanced Security Mode

- » Powerful Drill-Down Data Analysis
- » Extended Library of 40+ Charts, 2D and 3D Graphs

Navigator is a full-blown, ad-hoc reporting solution, empowering business users to create custom reports, interactive dashboards, and intelligent analytics -- all in a single web browser.

A Modular Approach

Our modular approach to reporting is extremely flexible and straight-forward; buy only the modules you need to be at your peak performance. Navigator currently lets you create custom reports with the following six modules:

- » BlackBerry® Enterprise Server
- » CA® Service Desk
- » CA® NSM
- » CA® Asset Management
- » CA® Software Delivery
- » BMC® Remedy
